Definition

Scrum is an agile framework for project management.

- Iterative development.
- Team collaboration for solving complex problems.
- Continuous improvement.

History

- Introduced by Jeff Sutherland and Ken Schwaber in the early 1990s.
- Scrum quickly gained popularity due to its focus on iterative development, collaboration, and adaptability.

The Scrum method is inspired by the "Scrum" formation in Rugby.

Generally

The framework involves breaking down projects into iterations, known as sprints, a sprint can have a duration that generally varies between two weeks and a month.

Scrum events

The Sprint is a container for all other events. Each event in Scrum is a formal opportunity to inspect and adapt Scrum artifacts. These events are specifically designed to enable the transparency required.

- Sprint.
- Sprint Planning.
- Daily Scrum.
- Sprint Review.
- Sprint Retrospective.

The Roles of the Scrum Methodology

We have 3 major roles for methods:

- **Product Owner :**

is the one who define the customer's needs and vision for the final product. He work in collaboration with the rest of the team.

- **Scrum Master:**

his mission is to ensure that the team is fully operational and capable of accomplishing the tasks of each current sprint. He is a bridge between the product owner and the development team.

- **Development Team:**

is responsible for delivering the final product at the end of each sprint.

Advantages

As you might expect, there are several recognized advantages and disadvantages of the Scrum methodology. Let's start by exploring the advantages:

- Adaptability and flexibility.
- Creativity and innovation.
- Time to market
- Lower Costs.
- Creates Transparency.

Disadvantages

As with anything, where there are advantages there are also disadvantages. Let's now explore those disadvantages.

- Requires a Team Environment.
- Needs Experience.
- It can be hard to integrate with a classic project management approach.

Conclusion

Scrum is a simple, lightweight, and adaptable framework that teams can employ to continuously deliver value throughout a project. Scrum offers an excellent way of structuring work, with many advantages. It aims to create working environments where people are productive and happy. Besides, it provides a perfect approach for managing complex projects.
