# Definition

Scrum is an agile framework for project management.

- iterative development
- team collaboration for solving complex problems
- continuous improvement

# History

- Introduced by Jeff Sutherland and Ken Schwaber in the early 1990s
- Scrum quickly gained popularity due to its focus on iterative development, collaboration, and adaptability.

The Scrum method is inspired by the "scrum" formation in rugby

# Generally

The framework involves breaking down projects into iterations, known as sprints, a sprint can have a duration that generally varies between two weeks and a month.

# Scrum events

The Sprint is a container for all other events. Each event in Scrum is a formal opportunity to inspect and adapt Scrum artifacts. These events are specifically designed to enable the transparency required

- Sprint
- Sprint Planning
- Daily Scrum
- Sprint Review
- Sprint Retrospective

# Scrum artifacts

Scrum's artifacts represent work or value. They are designed to maximize transparency of key information. Thus, everyone inspecting them has the same basis for adaptation

# The Role of the Scrum Methodology

We have 3 major roles for methods :

- Product Owner
- Scrum Master
- Development Team

**The product owner :** is the one who define the customer's needs and vision for the final product. He work in collaboration with the rest of the team.

**The Scrum Master:** his mission is to ensure that the team is fully operational and capable of accomplishing the tasks of each current sprint. He is a bridge between the product owner and the development team.

**The Development Team:** is responsible for delivering the final product at the end of each sprint.
