Presentation Overview

Definition

Scrum is an agile framework for project management.

- iterative development
- team collaboration for solving complex problems
- continuous improvement

History

- Introduced by Jeff Sutherland and Ken Schwaber in the early 1990s
- Scrum quickly gained popularity due to its focus on iterative development, collaboration, and adaptability.

The Scrum method is inspired by the "scrum" formation in rugby

Generally

The framework involves breaking down projects into iterations, known as sprints, a sprint can have a duration that generally varies between two weeks and a month.

Scrum events

The Sprint is a container for all other events. Each event in Scrum is a formal opportunity to inspect and adapt Scrum artifacts. These events are specifically designed to enable the transparency required

- Sprint
- Sprint Planning
- Daily Scrum
- Sprint Review
- Sprint Retrospective

Scrum artifacts

Scrum's artifacts represent work or value. They are designed to maximize transparency of key information. Thus, everyone inspecting them has the same basis for adaptation

The Role of the Scrum Methodology

We have 3 major roles for methods :

- Product Owner
- Scrum Master
- Development Team

The product owner : is the one who define the customer's needs and vision for the final product. He work in collaboration with the rest of the team.

The Scrum Master: his mission is to ensure that the team is fully operational and capable of accomplishing the tasks of each current sprint. He is a bridge between the product owner and the development team.

The Development Team: is responsible for delivering the final product at the end of each sprint.
